### **DETAILED ACTION**

#### **Notice to Applicant**

1. This communication is in response to the RCE filed on 11/02/07. Claims 1-174 and 197-198 have been cancelled. Claims 175-186 and 199-208 are pending.

#### ***Allowable Subject Matter***

2. Claims 175-208 are allowed. The following is an examiner's statement of reasons for allowance and in light of Applicant's arguments.

Independent claims 175 and 199 are directed to "analyzing said available electives in response to input by said input user to provide via said interface analysis information regarding said future care to allow informed choices of said electives to be made; receiving from said input user via said interface at least one election of at least one of said electives; providing said input user an identification instrument comprising a unique identification parameter corresponding to said participant; storing in a computer-readable registry end-of-life information and said unique identification parameter in the form of an information set corresponding to said participant, said end-of-life information comprising said received raw data and said at least one election; receiving a request from an output user identifying the occurrence of an anticipated state in said participant; verifying that said request includes said unique identification parameter; if so, generating an information product derivative of said information set comprising said participant's election corresponding to said incapacitated state, said information product

being generated in a form that is enforceable in the jurisdiction from which said request was received; and communicating said information product to an output recipient”.

The closest prior art of record, Perry et al. (5,241,466) discloses system for administering a central depository for living wills and other associated information.

Mindrum (6,340,978) discloses method and apparatus for recording and presenting life stories.

Krim (2002/0072925) discloses posthumus communication. However, none of the cited prior fairly teaches/ suggests “analyzing said available electives in response to input by said input user to provide via said interface analysis information regarding said future care to allow informed choices of said electives to be made; receiving from said input user via said interface at least one election of at least one of said electives; providing said input user an identification instrument comprising a unique identification parameter corresponding to said participant; storing in a computer-readable registry end-of-life information and said unique identification parameter in the form of an information set corresponding to said participant, said end-of-life information comprising said received raw data and said at least one election; receiving a request from an output user identifying the occurrence of an anticipated state in said participant; verifying that said request includes said unique identification parameter; if so, generating an information product derivative of said information set comprising said participant’s election corresponding to said incapacitated state, said information product being generated in a form that is enforceable in the jurisdiction from which said request was

received; and communicating said information product to an output recipient", as recited in claims 175 and 199 above.

Claims 176-186 and 200-208 incorporate the features of claims 175 and 199 through their dependencies, and are also allowed for the same reasons given above.

### **EXAMINER'S AMENDMENT**

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
